BRAND STORY

ENGEL is legendary in functional clothing. We create designs that make every workday safer, simpler and more comfortable.

Our family business has grown through four generations. Since one of our founders, Carl J. Engel, returned from the United States to southern Denmark inspired by blue denim and filled with new ideas, we have worked to create the best workwear on the market.

We deliver functional, comfortable, durable and modern workwear where every detail has a purpose. Our process is straightforward. We start by understanding the user's needs in detail. Then we develop new designs to meet those needs. No more. No less.

The passion and curiosity to create new and better workwear are deeply rooted in our brand, which led fourth-generation owners John and Lars Engel to break with convention and challenge the use of traditional materials and methods. Today we continue to refine our craftsmanship and take pride in developing and exploring new materials, designs and processes that push the boundaries of innovation.

Through our constant focus on functionality and the user's needs, ENGEL has grown into a globally recognised brand. We remain dedicated to our mission of producing functional workwear that is comfortable to wear and robust enough to withstand the toughest use. Workwear where functionality always comes first.

FUNCTION FIRST

ABOUT ENGEL

FUNCTIONAL WORKWEAR SINCE 1927

ENGEL is part of F. ENGEL K/S, a family-owned textile group that combines craftsmanship, dedication and innovation. With roots in a strong pioneering spirit, proud family traditions and solid business sense, the company has maintained its focus on innovative materials and designs that prioritise functionality across all product categories. F. ENGEL has grown steadily since its founding and today stands strong with three brands: ENGEL workwear, SUNWILL business and fashion apparel, and DEERHUNTER hunting and outdoor clothing.

OWN PRODUCTION IN LITHUANIA

The company ENGEL-Dali operates two factories in Lithuania, equipped with the latest technology to ensure both high quality and flexible delivery. Daily contact between Denmark and Lithuania streamlines workflows and creates dynamic collaboration, where the many skilled employees are considered a natural part of the family. The geographic proximity also provides increased flexibility, with only 48 hours of transport time from Lithuania to Haderslev.

ROBOT WAREHOUSE

Our robot warehouse is extremely energy efficient and can operate around the clock without the need for light or heat. The ten robots together use no more energy than an average vacuum cleaner. The current AutoStore system at F. ENGEL holds about 130,000 bins, 40 robots and 12 picking ports, efficiently serving our brands and international customers.

TESTED BY THE INDUSTRY

Our collection is not only validated internally but also evaluated by industry professionals to ensure the garments are fit for purpose. Every detail, from pocket placement to overall design, is thoroughly tested before production begins. Feedback from these experts is incorporated into development, resulting in innovative, durable workwear that puts functionality first.

ENGEL's quality control process ensures that our workwear is not just clothing but a reliable tool for a safe, efficient and comfortable working day.

RESPONSIBILITY

As part of the F. ENGEL, we are committed to taking responsibility for the impact our consumption has on the environment. Our goal is to be recognised in the market for our unmatched quality and to ensure that every action within the company is carefully considered.

This commitment means that everything we do, from the production of workwear to our collaboration with colleagues, suppliers and customers, is characterised by a deeply rooted integrity that is part of our DNA.

OUR BASIC RULE: 3 OUT OF 4

At F. ENGEL, four guiding principles form the foundation of our responsibility efforts:

RESPECTABILITY

We uphold integrity and accountability by staying informed about and complying with relevant legislation, particularly concerning environmental and social matters. Our focus on quality and safety is reinforced by documented standards and procedures in product development, ensuring compliance with regulations on product quality and chemicals.

QUALITY

Quality is at the heart of everything we do. Durable, innovative materials are central to our design process. We cultivate responsible partnerships and conduct thorough testing to ensure that our products meet the highest standards.

CIRCULARITY

We are working to integrate circular initiatives throughout our processes - from product development to end-of-life - ensuring our products contribute to greater accountability.

REDUCE

We are committed to minimizing resource use throughout the entire value chain.

RESPONSIBLE CONSUMPTION AND PRODUCTION

ENGEL is part of F. ENGEL, which has committed to supporting the 17 Sustainable Development Goals (SDGs) set by the United Nations. These global goals address critical social (people) and environmental (planet) challenges. In line with the Group's overall direction, ENGEL places particular emphasis on SDG 12: Responsible consumption and production - focusing on extending product life cycles and promoting better use of resources throughout our value chain.

CERTIFICATIONS AND MEMBERSHIPS

At ENGEL we actively engage with recognised certifications and memberships to support our goals. These initiatives provide essential documentation and reinforce responsible practices regarding chemical use, material selection, and the social and environmental aspects of our products and business operations.

AMFORI

We focus on responsible sourcing by working exclusively with Amfori BSCI-accredited suppliers. Amfori BSCI (Business Social Compliance Initiative) is a globally recognised framework for assessing and monitoring supplier practices. All ENGEL suppliers are encouraged to be Amfori BSCI members, follow our Code of Conduct and undergo regular assessments to ensure compliance.
F. ENGEL Amfori BSCI membership number: 208-00057-001

OEKO-TEX® STANDARD 100

96% of our collection is certified according to OEKO-TEX® Standard 100, guaranteeing that every fabric component, coating, seam, zipper and more is tested for harmful substances and meets strict health and safety criteria.

REPREVE®

REPREVE® is a leading brand of recycled performance fibres produced from plastic bottles and post-industrial waste. REPREVE®'s U-Trust verification ensures the accuracy of recycled content, while FiberPrint tracking technology confirms the presence of REPREVE® fibres throughout the supply chain. ENGEL currently offers **76 products** containing REPREVE®, available in more than **449 variations**.

SORONA®

We use SORONA®, a fibre made from about **37%** plant-based raw materials. SORONA® is developed with a focus on function and quality, offering long-lasting stretch, shape retention and comfort. This ensures that the workwear keeps its fit and feels comfortable even during extended use.

ECOVADIS

F. ENGEL joined EcoVadis in 2024 to focus on improvements in environment, labour and human rights, ethics and responsible sourcing. EcoVadis provides a global performance rating that we use to develop our processes, engage employees and suppliers, and strengthen our efforts across the supply chain. We have been awarded a bronze medal, which gives a concrete starting point for continuous improvement.

BETTER COTTON INITIATIVE

ENGEL IS A PROUD MEMBER OF THE BETTER COTTON INITIATIVE

Better Cotton Initiative promotes improved practices in cotton farming worldwide. Through our membership, ENGEL supports the spread of Better Cotton Initiatives to enhance social and environmental conditions in cotton production. The program focuses on areas such as crop protection, water management, soil health, biodiversity, fiber quality, decent working conditions, and effective management systems.

Our approach is rooted in a commitment to support local communities that contribute to our supply chains.

Better Cotton Initiative operates with a Mass Balance system where cotton purchased from Better Cotton Initiative farmers is mixed with conventional cotton. Products made under this system do not necessarily contain Better Cotton Initiative, but the Mass Balance system ensures that cotton is sourced from certified farmers. This approach helps ongoing learning and improvements in farming practices, social standards, and environmental protection.

ENGEL has pledged to source at least 80% of our cotton through Better Cotton Initiative, a target we have already achieved.

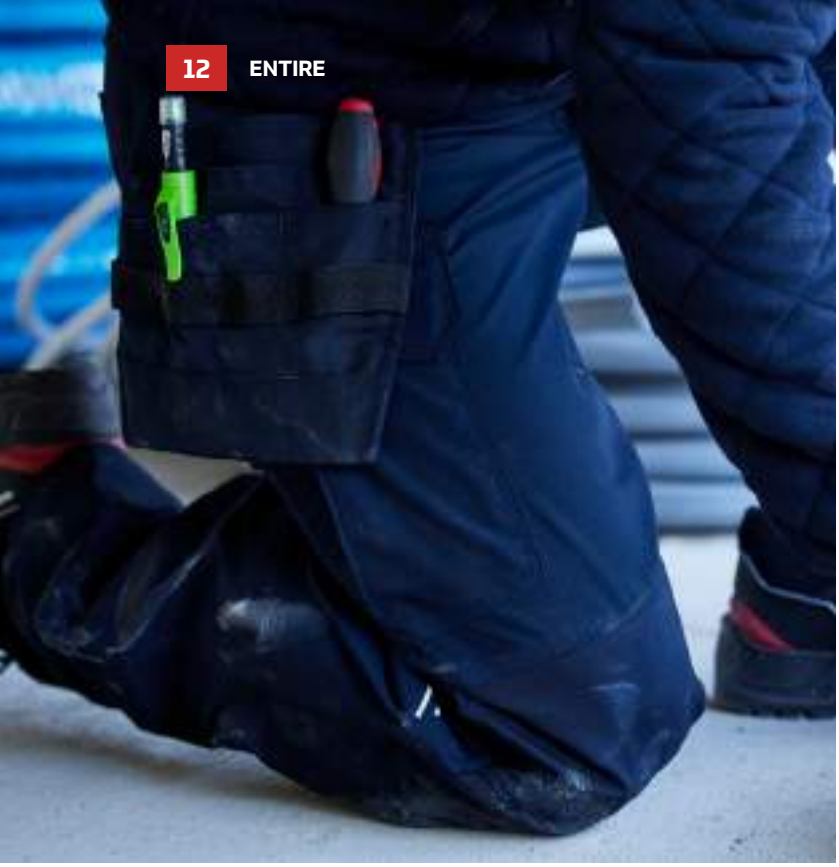

RE:TURN

A TAKEBACK SYSTEM FOR DISCARDED WORKWEAR

Discarded workwear does not need to be wasted. With RE:TURN, ENGEL offers a takeback system where used workwear is collected and recycled for new purposes, for example by being broken down into fibres for new textiles or transformed into materials for insulation and other industrial products.

When workwear is returned through RE:TURN it helps reduce waste and make use of valuable raw materials.

Upon request, ENGEL provides documentation showing how much workwear the company has returned and what proportion was recycled, supporting concrete sustainability goals.

ENTIRE

GEAR UP FOR EVERY CHALLENGE

ENTIRE collection presents a new approach to workwear, inspired by fashion's ability to combine functionality and style. For years, fashion has drawn inspiration from workwear technologies and durable designs, transforming them into collections that perfectly balance practical use and contemporary style.

The collection follows this mindset: workwear created for professionals yet designed to fit into everyday life. With ENTIRE we reinterpret workwear DNA, uniting our core values of strength, durability and functionality with a modern, fashion-forward twist.

Welcome to a new generation of workwear where tradition and innovation go hand in hand.

BIONIC FINISH® ECO

RRP excl. VAT **74,00 EUR**

BIONIC FINISH® ECO

BIONIC-FINISH® ECO is a patented fluorine-free technology by Rudolf Group that effectively protects textiles from rain and water-based stains

BIONIC-FINISH® ECO can be used on all types of fibers and is highly resistant to household and industrial laundering. This technology provides excellent water repellency with minimal application quantities, without affecting the texture, appearance or breathability of the treated textiles.
In addition, BIONIC-FINISH® ECO products contain a significant amount of renewable bio-based raw materials, up to 90%, meeting the growing consumer demand for sustainable products.

sorona®

SORONA® FIBRE

DuPont™ Sorona® fibres and fabrics are an alternative to certain other synthetic materials. It is a semi-synthetic material made partly from plant-based raw materials, such as corn, which gives the product natural stretch and elasticity.

2-WAY STRETCH IN THE FABRIC

Due to elastic fibers woven into the fabric, this 2-way Super Stretch garment is extremely flexible. Super Stretch garments follow the movements of the body and give great comfort. Furthermore, Super Stretch garments return to their original shape after stretching which means that they keep their shape for longer.

WELCOT

COMFORT IN 100% COTTON

WELCOT is the classic workwear collection made from 100 percent heavy cotton. The durable material provides natural comfort throughout the day and extra safety, as cotton fibres do not melt when exposed to heat or sparks.

The collection combines a timeless design in black, grey and blue with robust fabrics that can handle the toughest workdays.

WELCOT unites tradition and functionality in workwear that lasts and ensures you can always work comfortably and safely.

VENTURE

A PERFECT MATCH FOR INDUSTRY

The VENTURE collection is developed for industrial needs and made from a durable polyester/cotton blend. The material is chosen for its strength and longevity while ensuring comfort in both warm and cooler environments. The fabric's properties make the collection particularly suitable for work with machinery, as heat is drawn away from the body, helping you stay focused and comfortable even in demanding settings.

VENTURE is the safe choice for industry when you do not want to compromise on quality or comfort.

CARGO

TAILORED FOR THE TRANSPORT SECTOR

The CARGO collection is developed in close collaboration with drivers, warehouse workers and hauliers so the clothing meets the real needs of the transport industry. With mechanical stretch for extra mobility, reflective details and fluorescent materials for increased visibility, plus functional pockets and straps for tools and equipment, the collection combines comfort and practical usability.

The result is workwear with modern design, durable materials and a fit that lasts all day, no matter how many times you bend or climb in and out of the vehicle.

SAFETY

YOUR SAFETY IN FOCUS

The SAFETY collection has been developed for the needs of the industry and stands for uncompromising quality and high functionality. All products are certified according to EN ISO 20471 and meet the strictest standards for fluorescent workwear. The collection combines modern fit with sport-inspired design and functional details that make the workday safe, efficient, and comfortable.

A large part of the collection is made of stretchy materials, where elastic fibers are woven directly into the fabric. It provides flexibility, shape stability and ensures a good fit.

SAFETY is workwear that combines visibility, flexibility and comfort in a collection created to meet the industry's highest demands.

EN ISO 20471

Is used, for example, in road construction, when working on road beds and on building sites when the visibility of people is important.

ENGEL Safety products are certified in accordance with the "clearly visible warning clothing" specifications according to EN ISO 20471. EN ISO 20471 is a European standard with requirements for warning clothing, which must make the wearer visible in dangerous situations in daylight, in the headlights of vehicles and in the dark. Functional requirements for colour and retro-reflection and minimum surface areas, distribution and placing of the reflective materials are also part of the standard.

The classification in accordance with three classes is based the surface area of the fluorescent material and the reflecting material. Class 3 clothing products have the highest visibility and Class 1 clothing the lowest. Whether Class 1 clothing, 2 or 3 products for safeguarding a person should be used ultimately depends on the area of use.

Visibility conditions on-site are special criteria to be considered here. A risk analysis of the various risk groups must be performed for this. With varying work assignments or in the event of doubts, it is recommended Class 3 clothing clothing be worn.

PICTOGRAM

The clothing carries a new pictogram. The pictogram shows the class that the clothing is tested and certified for in accordance with EN ISO 20471.

RESPONSIBILITY AND CONTROL

Compliance with the standards is controlled by official authorities. The employer is obliged to provide the prescribed warning clothing.

INSTRUCTIONS FOR USE

- Warning clothing must always be worn closed, so that the reflective strips are not interrupted.
- The reflective strips on the trousers must not be covered
  by boots, etc.
- The washing and maintenance instructions must be observed.
- If several of these pieces of clothing are worn in accordance with EN ISO 20471, the visibility with the fluorescent and reflective material is increased.

CLASS 3 CLOTHING CLOTHING "HIGH RISK/PASSIVE"

With work on roads, rails or building sites with or without protection from traffic. In areas with normal driving speed > 60 kmh Class 3 clothing must be worn.

CLASS 2 CLOTHING CLOTHING "HIGH RISK/PASSIVE"

With work on roads, rails or building sites with protection from traffic. In areas with normal driving speed < 60 kmh Class 2 clothing can be worn.

CLASS 1 CLOTHING CLOTHING „HIGH RISK/PASSIVE“

With work on roads, rails or building sites with protection from traffic. In areas with normal driving speed < 30 kmh Class 1 clothing can be worn.

Class	Fluorescent Material	Reflective material	Symbol
Class 3	0.8 m²	0.2 m²	 X EN ISO 20471
Class 2	0.5 m²	0.13 m²	
Class 1	0.14 m²	0.10 m²

SAFETY+

DESIGNED TO PROTECT IN EXTREME ENVIRONMENTS

When it comes to safety, there are no shortcuts. The SAFETY+ range provides a high level of protection and is designed and manufactured for use in particularly hazardous work environments, guarding against heat, flames, chemicals, static electricity and industrial hazards such as welding sparks and electric arcs.

The series not only meets the specific safety certifications required for working in extreme or dangerous conditions but also offers ultimate comfort for all-day wear throughout the year.

Knee Pads

ISO 15797 - WITHSTAND INDUSTRIAL WASHING

ISO 15797 is an international standard specifying what a product should be able to withstand in relation to industrial washing and finishing procedures. The products are tested in relation to washing and drying processes, and the label on each product provides information on which washing and drying processes are suitable for the product.

- Soft fleeced lined collar for extra comfort
- Comfortable ribbed collar and cuffs for effective wind protection
- Detachable hood
- Straps to attach gas alarm at the front
- Flame-retardant reflectors
- Inherent flame-retardant fabric, even after washing
- Fluorescent hi-vis material
- Taped seams
- Extended back for warmth
- Concealed zipper with press studs at the front
- D-ring for ID card in right pocket
- Snow skirt at the bottom protects against cold and snow
- Smart functional pocket details and pleats to prevent embers from getting lodged
- Use together with suitable trousers or overalls with same or higher insulation classification, to attain protection against cold
- Must be worn with 2930-180 to achieve EN ISO 20471 Class 3
- ELIM 24,0 cal/cm²

2930-180 NEW
SAFETY+ WINTER TROUSERS

Sizes:	XS-6XL
Shell fabric:	55% Polyester / 26% Modacrylic / 18% Cotton / 1% Antistatic fibre, 300 g/m², FR
Membrane:	PU Coating
WP/MVP:	WP ≥ 20000 Pa / R_{et} > 40 m² Pa/W
Treatment:	Water Repellent
Lining:	100% Cotton
Wash:	40

- Knee reinforcement
- Hidden button closure
- Adjustable elastic in the waistband
- Roomy slanted front pockets
- Hidden two-way zipper with access to inner lining
- Snow gaiter in the leg
- Reflective details for increased visibility
- Velcro strap for adjustment at the foot and access to trouser pockets via the overtrousers
- Use together with suitable top with same or higher insulation classification, to attain protection against cold
- Must be worn with 1930-180 to achieve EN ISO 20471 Class 3
- ELIM 24,0 cal/cm²

Refer to the model's washing instructions for certified standard(s) and classification.

GENERAL USER INFORMATION

- In workplaces, several different hazardous situations and accidents can occur at the same time, which is why we have chosen to use a multifunctional fabric that has fire-retardant, antistatic and arcing properties.
- Safety+ may only be used together in a jacket combined with trousers or overalls of the same or higher classification.
- The boiler suit is the only separate garment that can be used without a jacket.
- The protective clothing must be fastened when worn in order to provide optimum protection.
- The protective effect of the workwear only works when used correctly. We recommend trying the protecting protective clothing on before making a final choice.
- Normal wear and tear, washing and possible contamination can affect and reduce the flame retardant and electrostatic properties of the protective clothing.
- If the user experiences sunburn-like symptoms of UVB penetration, the protective clothing must be repaired if possible or replaced. The use of more resistant protective layers should be considered for future use.
- You should comply with the washing and maintenance instructions to ensure optimum product service life.
- Additional protective equipment may be required
- The protective clothing is designed for quick removal.
- Available sizes for tops size XS-6XL and bottoms size 42-74

EN ISO 11611: 2015
PROTECTION DURING WELDING AND CORRESPONDING PROCESSES

- The protective clothing provides the user with limited protection against flames, liquid metal splashes, radiant heat and short-term accidental electrical contact.
- The level of protection against flame will be reduced if the welder's protective clothing is contaminated with flammable materials.
- The protective clothing only protects against short-term unintentional contact with the arc welding circuit.
  Additional insulating layers of clothing are recommended where there is an increased risk of electrical shock.
- The anti-sparking effect of the protective clothing is quickly eliminated by wearing easily flammable clothing together with the protective clothing. Therefore, you must ensure that shirts, T-shirts and outer garments also meet the requirements of being flame retardant. For underwear, pure cotton is recommended.
- Guidance for correct selection of EN ISO 11611 classification: class 1 = gas welding, TIG, MIG, micro-plasma, spot welding, brazing and MMA welding (with covered electrode). Environmental conditions:
  Operation of e.g. oxygen and plasma cutting machines, resistance welding machines, machines for thermal welding and bench welding.
- Guidelines for correct selection of EN ISO 11611 classification:
  class 2 = MMA welding (with ordinary or cellulose-coated electrode, MAG (with CO_2 or mixed gas), MIG (with high voltage), arc welding, plasma cutting, soldering, oxygen cutting and thermal spraying. Environmental conditions: Limited space and welding/cutting above head height or similar restricted positions.
- An increased amount of oxygen will reduce the flame retardant properties of welding. Beware of welding in confined spaces if the amount of oxygen is likely to increase.
- Additional body protection is mandatory, e.g. for welding above head height.
- You should comply with the washing and maintenance instructions to ensure optimum product service life.
- The electrical insulating effect of protective clothing is reduced by perspiration, water, moisture and dirt.

EN ISO 11612: 2015
PROTECTION AGAINST HEAT AND FLAME

- Protective clothing for persons exposed to heat is manufactured according to the above-mentioned standards and prevents the spread of flames if the clothing accidentally comes into contact with flames.
- The flame retardant effect of the protective clothing can be quickly eliminated by wearing easily flammable clothing together with the protective clothing. Therefore, make sure that shirts, T-shirts and outer garments are also flame retardant. With regard to underwear, we recommend pure cotton or flame retardant materials and not synthetic materials such as polyester or polyamide.
- Warning: If protective clothing is worn directly on the skin, the risk of burns is not eliminated in the event of liquid metal splashes coming into contact with the protective clothing.
- When using protective clothing marked with code D and/or E, in the event of metal splashes, the user must leave the area and immediately remove the clothing.
- The clothing shall then be cleaned or removed from service.
- The protective clothing's flame retardant properties are reduced if the protective clothing comes into contact with flammable materials.
- You should comply with the washing and maintenance instructions to ensure optimum product service life.

EN 1149-5:2018
ELECTROSTATIC PROPERTIES – PART 5: REQUIREMENTS FOR THE MATERIAL'S PERFORMANCE AND DESIGN

- The person wearing the electrostatic dissipative protective clothing must be properly grounded. The resistance between the person's skin and the ground must be less than 10^8 Ω, e.g. by wearing suitable footwear on dissipative or conductive floor coverings.
- Electrostatic dissipative protective clothing must not be worn openly or removed in flammable or explosive atmospheres or when handling flammable or explosive substances.
- Electrostatic dissipative protective clothing is intended for use in zones 1, 2, 20, 21 and 22 (see EN 60079-10-1 [7] and EN 60079-10-2 [8]) where the minimum ignition energy for any explosive atmosphere is not less than 0,016 mJ.
- Electrostatic dissipative protective clothing must not be used in oxygen-enriched atmospheres or in zone 0 (see EN 60079-10-1 [7]) without the prior approval of the person responsible for safety.
- The electrostatic dissipative performance of the electrostatic dissipative protective clothing can be affected by wear, washing and possible contamination.
- Electrostatic dissipative protective clothing must be worn in such a way that it permanently covers materials that do not meet the requirements during normal use (including bending movements).
- Conductive parts in the form of metal buttons, zippers and the like are permitted in protective clothing if they are fully covered.
- The protective clothing has antistatic properties according to EN 1149–5 and is suitable for use in potentially explosive areas "ATEX" (except oxygen-saturated atmospheres).

EN 13034:2005+A1:2009
LIMITED PROTECTION AGAINST LIQUID CHEMICALS

- The protective clothing protects the user against various chemicals. Under EN13034:2005+A1:2009 the following has been tested: H_2SO_4 30%, NaOH 10% , O-Xylene, 1-Butanol undiluted.
- May not be used in rooms with an oxygen content of more than 21% without the approval of a safety representative.
- In the event of an accident with chemical or flammable liquids, the protective clothing on the affected part must be removed immediately and disposed of without coming into close contact with the skin.
- Pay special attention to problems which may be caused by deterioration of special repellency treatment, and the correct way of reapplying and/or regenerating these treatments
- In order to reactivate the property of the substance against rejection of chemical splashes (EN13034:2005+A1:2009), the protective clothing must be re-treated either by tunnel drying or tumble drying at 90°C (see ISO 15797 8A).
- Reprocessing after every wash with HYDROB FC to comply with EN13034:2005+A1:2009 coverage.
- We recommend testing the protective properties of the fabric before re-using the garments to make sure that all the properties are maintained after washing.
- The chemical protection of suits type 6 have been tested under complete suit test (5.2), and the partial body protections type PB6 have not been tested under complete suit test (5.2).

EN 61482-2:2020
PROTECTS AGAINST THERMAL HAZARDS OF AN ELECTRIC ARC

Warning! Not all voltage-carrying parts in arc installations can be insulated against direct contact.

- The protective clothing is manufactured in accordance with the mentioned norms and is designed to protect the user against immediate and unintentional contact with conductive components up to max. 100 V DC.
- Environmental conditions and risks in the workplace must be taken into account.
- Deviations from the parameters in this document may result in more severe conditions.
- Wear protective clothing closed.
- Protective clothing according to this standard is not intended to be used as electrically insulating protective clothing and does not protect against electric shock.
- Protective clothing that becomes contaminated with grease, oil or flammable liquids or flammable materials must not be used.
- Protective clothing that is damaged to such an extent that the protective properties are impaired (e.g. holes in the fabric, non-functioning fasteners) must not be used.
- For full body protection, use appropriate additional protective equipment (helmet with face shield, protective gloves and footwear (boots).
- Do not wear clothing such as shirts, undergarments or underwear made of materials such as polyamide, polyester or acrylic fibres, which melt in the event of an arc flash.
- The protective clothing must be stored in a dry, dark and well-ventilated room.
- In the event of holes or other damage, the protective clothing must not be repaired by the user.
- Our clothes are tested according to the method 2 = Box test, which uses a controlled and direct electric arc to determine the clothing's/fabric's protection class.
- APC 1 Protection against 4kA – APC 2 Protection against 7kA

If PPE is not used and kept in good condition, the expected lifetime is 5 years. Once PPE can no longer be used due to the end of product life, proceed with proper disposal following local regulations.

EN ISO 20471
HIGH VISIBILITY WORKWEAR

- Several items of Safety+ EN ISO 20471 clothing can be worn together for greater visibility.
- A class 3 garment must meet the following: Safety Class 2 top must be worn with an Safety Class 2 pants or bib-pants with two reflectors.
- Safety+ EN ISO 20471 clothing is CE-approved and type approved in accordance with EN ISO 20471. The figure (X) beside the pictogram states the safety category.
- The safety category shows the minimum requirement for both fluorescent and reflective material in the clothing.
- Protection may be reduced when the clothing is dirty.
- When worn, the clothing should be fully fastened for full protection.
- Ordinary wear and washing can dull the fluorescent and reflective effect of the clothing.
- The stated maximum number of washes is not the only factor that affects the lifespan of the clothing. It also depends on use, storage etc.
- The clothing must be stored in a dry, dark and well-ventilated room.
- See washing instructions for fabric qualities and classification.

EN ISO 20471	Fluorescent Material	Reflective Material
Class 3	0.8 m²	0.2 m²
Class 2	0.5 m²	0.13 m²
Class 1	0.14 m²	0.10 m²

SERVICE

Our dealers will happily provide advice on whether your company or organisation needs standard or special products. Prices, samples and delivery times are available from our sales consultants or via customer service on +45 7422 3680.

Workwear is an important part of a company's identity. It must reflect your profile and perform in daily use. At ENGEL we offer tailored solutions that create a uniform and professional appearance across employees and tasks.

SPECIAL DESIGN

We custom-make workwear according to customer requirements and adapt it precisely to the job, creating the desired company image. This ensures the garments meet both functional demands and support the company's identity. Even with our wide range, there can still be a need for special adjustments to make the workwear perfect. This can include adding thermal lining, reflective strips, ID pockets, extra pockets or other functional solutions that make the workday easier.

COLOURMIX

It is possible to combine standard colours used in our collections, including the Safety series, in various ways. This allows you to choose the colour combination that suits you and your employees' workwear.

SPECIAL COLOURS

It is possible to order special colours that match your company logo or visual identity, strengthening a professional and cohesive look. For this purpose, approximately 2,000 metres of specially dyed fabric are purchased, equivalent to at least 700 garments.

Because the fabric is dyed specifically for you, additional delivery time should be expected, but the result is workwear that reflects your company's brand down to the smallest detail.

MADE-TO-MEASURE WORKWEAR

ENGEL stocks a wide range of sizes and offers trousers in multiple leg lengths, but if the variants from our main collection do not meet the size requirements for certain employees, we provide made-to-measure workwear.

EMBROIDERY AND TRANSFER PRINTING

Just as workwear in company colours supports your image, adding a logo to the clothing provides both visibility and recognition. It serves as advertising for the company and makes it easier for customers and partners to identify employees, adding an extra layer of trust.

At our headquarters in Haderslev we have a large department with both printing and embroidery machines, allowing us to deliver workwear finished with logos on the chest, back or leg. We can also add personal names to make the garments even more individual.

We offer both embroidery and transfer printing in a wide range of colours, and both are produced in a quality that withstands daily use and many washes.

COLOURSTOP TRANSFER

- Reduces risk of colour bleed
- 40 °C wash
- For softshell products

INDUSTRIAL TRANSFER

- Durable transfer
- 60 °C wash
- For regular workwear

WATER TRANSFER

- Highly durable and stretchable
- Withstands tougher washing
- For all workwear

FLAME RETARDANT TRANSFER

- Durable transfer
- 60 °C wash
- For flame-retardant workwear

REFLECTIVE TRANSFER

- Hard-wearing and stretchable
- 40–60 °C wash
- For all workwear

WASH

ADVICE WHICH WILL PROLONG THE LIFESPAN OF YOUR WORKWEAR AND BETTER WASH RESULTS:

- Wash frequently and gently, it extends the life of the clothes.
- Do not use fabric softener.
- Never overfill the machine.
- Wash coloured clothes separately and inside out.
- We recommend that you use a washing powder for coloureds.
- Close Velcro closures and zippers before washing – they will last longer.
- If the workwear gets very dirty, wash it as soon as possible to avoid the dirt getting worked into the fabric.
- Never use bleach or other strong chemical products that can damage your clothing.
- Always check the care label and wash in accordance with the symbols for perfect wash results.

WASHING INSTRUCTIONS SAFETY

- If the maximum number of washes is not stated, the clothing has been tested and approved after five washes.
- Heavily soiled clothing should be spot washed using fabric detergent before placing the clothing in the regular wash, e.g. oil and grease.
- Washing detergents containing perborates may affect the colour of the material and the reflectors at high temperatures.
- We therefore recommend using standard colour fabric detergent.
- Do not use fabric conditioner.
- The clothing must be stored in a dry, dark and well-ventilated room.
- For further information about wash- and care symbols we refer to our website ***engel.eu***

WASHING INSTRUCTIONS SAFETY+

- If the maximum number of washes is not stated, the clothing has been tested and approved after five washes.
- To ensure optimal product life, wash and maintain according to the wash and care instructions. For further information, please refer to the care label.
- Only use and wash the products with closed buttons/zipper as described on the care label.
- Sort the garments according to colour and degree of soiling.
- Garments made from multi-functional fabrics must be washed separately from other fin machine capacity.
- To reduce the possibility of insoluble soap residues being deposited on the garments, synthetic detergents are recommended.
- Do not under any circumstances use bleaching agent/chlorine or fabric conditioner as these substances can ruin the fabric's finish.
- To reactivate the chemical-repellent properties of the fabric (EN 13034+A1:2009), the garments should be either tunnel-finished or overdried at min. 90 °C (see ISO 15797 8A).
- Recommended minimum moisture retention after drying is 4%.
- The clothes must be inspected for any defects after washing.
- Refer to the washing instructions for further information on the composition of the substance and other information.
- For further information about wash- and care symbols we refer to our website ***engel.eu***

SYMBOLS

OEKO-TEX® STANDARD 100

The majority of our workwear is OEKO-TEX® certified. OEKO-TEX® is the world's leading health certification for textiles. In short, OEKO-TEX® certification guarantees that the fabric/product is not harmful to the wearer's health. The 'Confidence in Textiles' logo is familiar to most people. OEKO-TEX® is a human-ecological product standard. The textiles are tested for harmful chemicals and dyestuffs. For further information see www.oekotex.com.

REPREVE®

REPREVE® is the most well-known, reliable fiber made from recyclable materials, including plastic bottles. REPREVE® is the only eco-fiber with U-Trust verification, which certifies that requirements relating to recycled contents are met. From any point in the supply chain, Repreve® is able to use our unique Fiber print tracking technology to test products and make sure that they contain REPREVE® – and in the right quantities.

BIONIC-FINISH®ECO

BIONIC-FINISH®ECO was developed by the RUDOLF GROUP and is the latest technology in environmentally friendly finishes to make products water-repellent. This treatment works by imitating nature and does not contain fluorocarbons.

CORDURA®

We use 100% CORDURA® – 220 g/m² – reinforcement on the knee pockets of most of our trousers. CORDURA® is an extremely durable material, which is incredibly hard-wearing and resistant to tears and holes.

- 10 x more durable than cotton
- 3 x more durable than standard polyester
- 2 x more durable as standard nylon

SORONA®

DuPont™ Sorona® fibres and fabrics are an alternative to certain other synthetic materials. It is a semi-synthetic material made partly from plant-based raw materials, such as corn, which gives the product natural stretch and elasticity.

LOXY®

We use LOXY® EN ISO 20471-certified reflectors. These reflectors meet applicable visibility requirements and make you more visible, thus reducing the risk of accidents. By combining flexibility with high visibility, our reflective materials provide maximum safety without compromising comfort.

INDUSTRIAL LAUNDRY

Products marked with this symbol can be industrially washed. This means that the product has been tested in such a way that it will retain its strength and shape during industrial washing. It has also been tested for shrinkage and colour changes. When it comes to industrial washing, we always recommend doing a test wash first, making sure to follow the care instructions on the label. Refer to the care label for further information.

PRO INDUSTRIAL LAUNDERING

Products labelled with a 'PRO' symbol are suitable for industrial laundering according to ISO 15797. ISO 15797 is an international standard specifying what a product should be able to withstand in relation to industrial washing and finishing procedures. The products are tested in relation to washing and drying processes, and the label on each product provides information on which washing and drying processes are suitable for the product.

THE LABEL COMPRISES THREE PARTS:

- the text 'PRO', which indicates that the instructions apply for industrial laundering
- a column with numbers from 1 to 8
- a symbol which indicates the drying process

The highlighted numbers indicate whether the product is made of 100% cotton or whether it is a product that contains synthetic fibres. At the same time, the number indicates which type of bleaching can be used; for example, the number 7 indicates that it is a dyed product made of 100% cotton which cannot be bleached. A square containing a hexagon indicates that the product can be tumble-dried, while a square with horizontal lines indicates that the product withstands tunnel finishing. If both symbols are included, both drying processes can be used for the product. The wash symbol provides information to the laundries so they know how the products have been tested and which washing and drying processes they can use.

SUPER STRETCH 4-WAY

Stretches in all directions to give maximum freedom of movement and comfort.

SUPER STRETCH 2-WAY

Stretches in length or width to improve comfort and mobility.

STRETCH

The fabric contains stretch for added comfort and ease of movement.

LIGHTWEIGHT

Made from thinner fabric that feels light and allows unrestricted movement.

DOPE DYED

Solution-dyed process with colour added during fibre production, reducing water use compared to traditional dyeing.

MULESING FREE

Made with wool from certified sources that do not use mulesing, ensuring animal welfare.

BREATHABLE

Allows body heat and moisture to escape, helping you stay dry and comfortable.

INSULATION

Shields against cold and supports natural breathability for comfort.

WATERPROOF

Fully waterproof materials and construction help keep you dry in wet conditions.

WATER REPELLENT

Surface treatment causes water to bead and run off, helping to keep the fabric dry.

TAPED SEAMS

Sealed seams stop water from entering through stitching points.

ROOM FOR HELMET

The hood is designed to fit over a safety helmet.

TOOL POCKETS “CLICK”
Click-on system makes it easy to attach or remove hanging pockets.

TOOL POCKETS “FIXED”
Designed with fixed hanging pockets for reliable storage and quick access to tools.

POCKET SCANNER
Special pocket designed to securely hold handheld scanners.

KNEE PADS
Compatible with ergonomic knee pads that can be inserted from the top or bottom, depending on the design.

EXTRA LENGTH
Extra fabric in the hem allows trousers to be extended when needed.

STANDARDS

EN 1149-5 - ANTISTATIC

Protective clothing with anti-static properties. This clothing protects against sudden discharges of electrostatic energy where there is a risk that static sparks may ignite combustible or explosive atmospheres. The user must be correctly earthed, for example by wearing suitable footwear, and the clothing must be connected to the body.

EN 61482-2 - ELECTRIC ARC

Protective clothing in accordance with EN 61482-1-2 protects against thermal hazards from an electric arc. This standard states that such clothing offers protection against electric arcs and is divided into 2 classes.

EN ISO 11611 - WELDING

Protective clothing in accordance with EN ISO 11611 protects against welding/spatter of melted metal and sparks aswell as heat in the form of convection- or radiant heat.

EN ISO 11612 - HEAT AND FLAME

Protective clothing in accordance with EN ISO 11612 protects against short-term exposure to heat and flame. This standard is divided into different categories, where the code letter indicates which requirement is met by the article of clothing in question. Each category is also broken down into different levels, depending on the degree of protection offered.

EN 13034-6 - CHEMICALS

Protective clothing in accordance with EN 13034-6 protects against splashes from liquid chemicals and is intended for use in cases entailing sufficiently low risk assessment and when a complete protective barrier againstliquids is not necessary, i.e. when the user is in a position to react in due time when his or her clothing has become contaminated. Low risk may be potential exposure to small volumes of spray or occasional low-volume splashes.

RIS 3279-TOM - RAILWAY INDUSTRY

Railway Group Standard sets out the minimum spetification for high visibility warning clothing ind the Rail Industry.

EN ISO 20471 - VISIBILITY

EN ISO 20471 standard is divided into 3 classes. The class designation describes how well the product is able to make the user visible. The greater the area of fluorescent material and reflection, the higher the classification. The fluorescent material offers greater visibility in daylight and twilight, while the reflective parts become visible when a vehicle's light or a work light is directed at the wearer in the dark.

EN 17353 - ENCHANCED VISIBILITY

This international standard specifies the requirements for enhanced visibility equipment which are capable of visually signaling the user's presence. The enhanced visibility equipment is intended to provide conspicuity of the wearer in MEDIUM RISK situations under any daylight conditions and/or under illumination by vehicles headlights or searchlights in the dark.

EN 13758-2 - UV PROTECTION

Products certified according to EN 13758-2 offer proven UVA and UVB protection against the harmful effects of the sun. A UPF value of +40 means that max. 1/40 of the sun's harmful rays penetrate the clothing. If the garment becomes worn, wet or stretched, the level of protection is reduced. Please follow the wash and care instructions.

EN 14404 - KNEE PROTECTION

EN 14404 is a European standard developed to set requirements for knee pads to provide optimum protection for users' knees. Knee pads are tested based on various requirements such as shock absorption, the ability to distribute pressure across the entire surface during kneeling positions, and the ability to prevent sharp or pointed objects from penetrating the fabric.

TYPE 2 - Foam or other padded knee pads attached in knee pad pockets on trousers or as a permanent part of the trousers.

LEVEL 1 - Knee pads for use on flat or uneven surfaces, providing protection against penetration at a force of at least (100 ± 5) N.

EN 342 - COLD PROTECTION

Clothing certified according to EN 342 is suitable for use in cold environments where low temperatures (from -5 °C and below), humidity, and wind create the need for extra insulating garments.

EN 343 - WATERPROOF AND BREATHABILITY

This pictogram states the degree of protection. The figures next to the pictogram state:

X: The outdoor jacket's ability to resist water penetration from the outside (water resistance)
4 = highest protection
1 = lowest protection

Y: Resistance to moisture transfer (breathability indicates how well moisture from perspiration can escape from the inside and out through the outer fabric
4 = very good drainage
1 = poor drainage

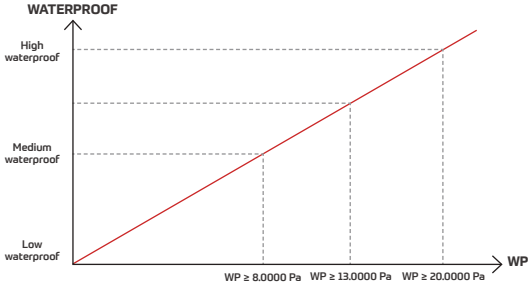

WP; Water penetration resistance is measured in "millimetre water column pressure". The water column pressure is measured by placing a liquid column gauge over the material so that material with water penetration resistance 5000 mm can keep water out from a five metre (5000 mm) gauge. Material with a water penetration resistance of 10.000 mm can resist water from a 10 metre (10000 mm) gauge, etc.

MVP; value indicates breathability of a membrane. MVP value is an expression of the quantity of water vapour that can escape through one square meter of a membrane within 24 hours. A breathable product rated at 5000 can therefore "breathe" 5000 g (5 litres) water vapour per square metre in 24 hours.

WATER PENETRATION RESISTANCE (WP)

The higher Pa value, the higher waterproofness

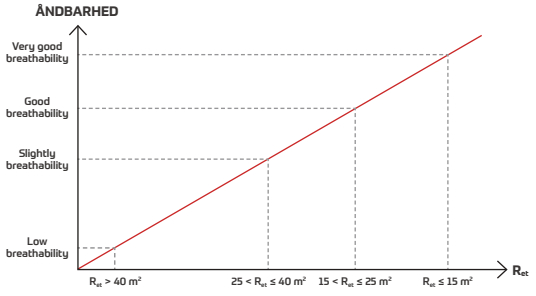

WP VALUE	SUGGESTED PERFORMANCE
WP ≥ 20.000 Pa	High Water proof - Can be used in heavy rain for a long time
WP ≥ 13.000 Pa	Medium Water proof - Can be used for light rain for long time or heavy rain for short time
WP ≥ 8.000 Pa	Low Water proof - Can be used in heavy rain for short time

WATER VAPOUR RESISTANCE (R_{et})

The lower R_{et} value, the better breathability

R_{et} value	SUGGESTED PERFORMANCE
$R_{et} \leq 15\ m^2$	Very good or extremely breathable, even when working at high activity
$15 < R_{et} \leq 25\ m^2$	Good breathability, suitable for working at high activity levels
$25 < R_{et} \leq 40\ m^2$	Slightly breathable, suitable for working at moderate activity levels
$R_{et} > 40\ m^2$	Limited breathability, suitable for working at moderate activity levels for a shorter time

TO MEASURE YOUR SIZE CORRECTLY:

Get someone to help you. If you do, you'll get a more exact reading. Keep your shirt and trousers on and stand in a relaxed position.

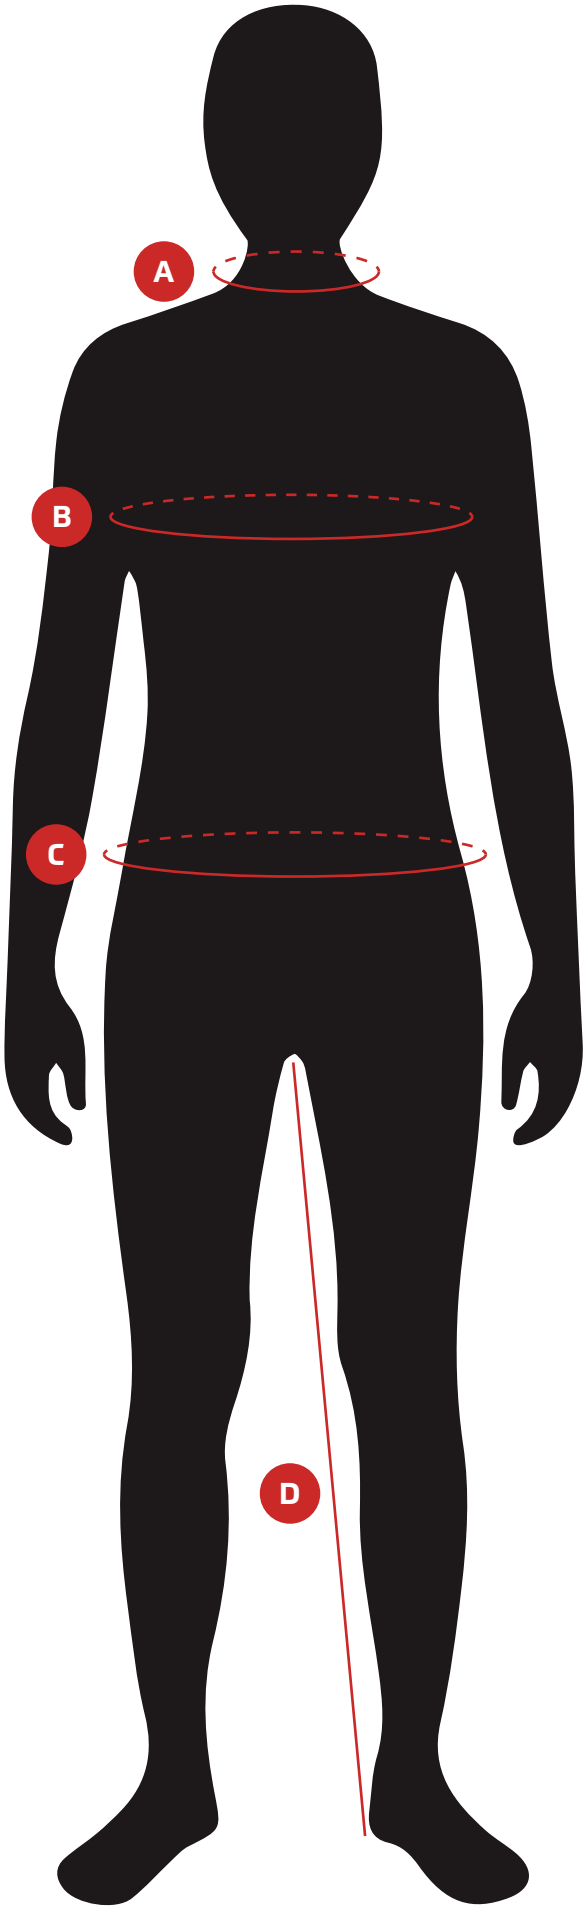

Let your arms hang loosely by your sides. Draw the tape measure horizontally around your body. It should lie close into the body, but should not be too tight.

A Measure around neck (measure tightly + 2 cm)

B Measure around the chest with arms flat along side of body

C Measure around body where waistband is to be placed

D Measure from crotch to floor inside at leg (without shoes)
